Small in size. Huge in performance. The SPORT Mini is ideal for sport fishing boats, leisure craft, and wake sports vessels.

Born from the same technology trusted on some of the world's most prestigious superyachts, the Sport Mini delivers exceptional underwater lighting performance in an ultra-compact, simple surface-mount design that requires just a 12.5 mm (0.5-inch) cable-entry hole.

Producing up to 1,500 fixture lumens, the Sport Mini has been engineered to outperform traditional compact underwater lights. At the heart of the design, our advanced underwater optics, supercharge the lighting effect.

Marine-grade hard-anodised aluminium, specialist toughened glass, and our latest sealing technology deliver exceptional durability. With IP69K certification, the highest recognised certification rating against water intrusion, boat owners can install the Sport Mini with complete confidence.

ADVANCED UNDERWATER OPTICS

The Sport Mini benefits from our most advanced underwater optics. Specifically designed by our in-house team of expert engineers to supercharge performance in our superyacht range, and now part of the Sport Mini. Our optics focus the light to create a blade, that cuts through the water in a way no other underwater brand can match. The result is a biblical performance boost, and a light capable of outperforming competitor products with twice the headline fixture lumen figure.

UNRIVALLED QUALITY. IP69K CERTIFICATION

The Sport Mini has been rigorously tested to IP69K, the highest protection standard available, to ensure your complete peace of mind. The marine-grade hard-anodized aluminum housing and specialist toughened colourless glass, provide an extremely tough outer surface. The addition of our latest seal designs make the Sport Mini one of the most robust and long-lasting underwater lights available anywhere.

IDEAL FOR LEISURE & WAKE SPORTS BOATS

The Sport Mini is ideal for lighting up sport fishing vessels, leisure craft, and wake sports boats. Even boats left in the water for extended periods of time can benefit from the Sport Mini, thanks to the use of high-quality materials and our state-of-the-art Tritonium coating. The Tritonium coating applied to the lens of each light helps protect the unit from underwater growth build-up, allowing the owner to simply wipe over the surface of the light regularly, saving hours of scrubbing.

EASY INSTALLATION. SURFACE MOUNT

Thanks to the surface-mount installation, Sport Mini underwater lights are quick and easy to install. Just a single 12.5mm (0.5") hole is required for installation, perfect for busy production schedules.

IP69K CERTIFICATION

To achieve the IP69K rating, a piece of equipment must go through a rigorous water intrusion test. The product is placed on a turntable that rotates five times a minute. It's sprayed at 80 to 100 bar/1,160 to 1,450 PSI, in phases of 14 to 16 l/min, and at temperatures up to 176°F/80°C.

TECHNICAL INFORMATION:

Fixture Lumens	1,500
Min/Max Operating Voltage	10-30V DC
Number of LEDs	6
Current/Power Consumption	12V DC 0.9A / 24V DC 0.5A
Driver Type	Internal. Reverse Polarity Protected.

PHYSICAL

Total Weight	150g
Cable Length	0.6m (23.6")
Hole Cut-Out (For Cable Entry)	0.5" (12.5mm)
Material	Hard-Anodised PTFE Aluminum

BOX CONTENTS:

- Sport Mini LED Underwater Light
- Mounting Screws & Insulating Washers
- Quick Install Guide

SPECIFICATION:
